

National Fraud Early
Warning & Threat
Prediction System

RAKSHAK AI

Predict. Prevent. Protect.

Problem Statement:

- India recorded over 1.14 million cybercrime complaints in 2023
- Digital arrest scams caused losses exceeding ₹1,776 crore in 2024
- Counterfeit currency continues to threaten financial stability
- Law enforcement mostly acts after complaints are filed
- Existing systems are reactive rather than proactive

Challenge:

How can we detect and neutralize fraud networks before citizens become victims?

Our Solution:

Introducing RAKSHAK AI

An AI-powered Digital Public Safety Intelligence Platform that:

- Predicts emerging scam campaigns
- Detects counterfeit currency in real time
- Maps fraud networks using Graph AI
- Identifies cybercrime hotspots
- Protects citizens through multilingual AI assistance
- Assists law enforcement with actionable intelligence

Vision

Move from Reactive Investigation to Predictive Prevention

Key Innovation

Fraud Outbreak Prediction

Current Approach:

Victim → Complaint → Investigation → Action

RAKSHAK AI Approach:

Threat Signals → AI Prediction → Early Warning → Prevention

What Makes Us Different?

- Predicts scam outbreaks before mass victimization
- Creates live fraud network intelligence
- Generates actionable alerts for banks, telecom operators, and law enforcement
- Combines cybercrime and counterfeit intelligence in one platform

System Architecture:

Digital Arrest Scam Radar

Real-Time Scam Detection

Features:

- Detects digital arrest scam conversations
- Identifies authority impersonation attempts
- Recognizes fear-based scam scripts
- Detects spoofed communication patterns

AI Technologies

- NLP
- Large Language Models
- Speech Analysis

Output

Risk Score:

- Low Risk
- Suspicious
- High-Risk Scam

Fraud Network Intelligence

Graph AI-Based Scam Network Mapping

Analyses

- Phone Numbers
- UPI IDs
- Bank Accounts
- Devices
- IP Addresses
- SIM Cards

Benefits

- Identifies hidden scam networks
- Detects money mule accounts
- Connects fraud cases across jurisdictions
- Provides evidence for investigations

Technology

Graph Neural Networks (GNN)

AI-Powered Currency Verification

Computer Vision Analysis

- Security Thread Verification
- Watermark Detection
- Microprint Validation
- Serial Number Analysis
- Feature Matching

Deployment

- Mobile App
- Bank Counters
- ATMs
- POS Devices

Geospatial Crime Prediction

Maps

- Scam Complaint Locations
- Counterfeit Currency Seizures
- Fraud Withdrawal Points
- Cybercrime Hotspots

AI Prediction

- Emerging Fraud Zones
- High-Risk Districts
- Resource Deployment Recommendations

Benefits

- Faster response
- Smarter patrol planning
- Improved inter-agency coordination

AI Assistant for Public Protection

Channels

- WhatsApp
- Mobile App
- Voice Bot

Capabilities

- Analyze suspicious messages
- Verify payment requests
- Assess call risks
- Guide fraud reporting

Multilingual Support

Supports multiple Indian languages for wider accessibility.

Impact & Benefits

Expected Impact

Citizens

- Early fraud warnings
- Reduced financial losses
- Increased digital trust

Banks

- Fraud prevention
- Faster account monitoring

Law Enforcement

- Predictive intelligence
- Reduced investigation time
- Stronger evidence generation

Government

- Improved cybercrime response
- Better public safety outcomes

Future Roadmap & Conclusion:

1. National Cyber Threat Exchange
2. Deepfake Detection Module
3. International Fraud Intelligence Sharing
4. AI-Powered Automated Case Generation

Thank You

Predict. Prevent, Protect.
